

VISION: WORLD SCENERIO IN YEAR 2070

World Population has now reached eleven billion.

Islam is now very prominent religion practiced around the world.

India is now abode of largest muslim population among different countries of the world.

Global warming has increased maximum temperature by two degree centigrade from year 2020 base. Most of coastal parts of world including Kolkata, Sunderban areas in India inundated by rise in water level. Extreme climate, Flooding, hurricanes will occur.

China will be most powerful nation in the world, with its vast pool of scientists and engineers, excellent education system and research work of its vast PhD students. Technological and manufacturing practices now developed through its policy of undertaking manufacturing works outsourced by rich nations.

Chinese policy through its Belt and Road initiatives now benefits economies of most of Asia and Africa. These countries will be economically dominated and its foreign policy will follow dictates of China. Science and technologies including bio technology, medicinal science, courses of remote sensing technology, geology, economics, management practices, e-commerce, becoming more and more attractive. Most of arts subjects will remain unattractive and neglected subjects.

Impact of micro-electronics around year 2070 will be, like the electric motor of today—largely unnoticed. Silicon based technology still dominates electronics. The electronics industry will continue to be four C's—component, communication, computation and control.

Artificial intelligence including advanced quantum computation now prevail in all fields of our life. Mediocre people being unable to match with technological knowledge will become isolated. With substantial reduction of scope of manual work, people will lean more and more towards socialism.

Our pursuit in finding alternate energy source remain far from success. Use of coal, petroleum and natural gases will continue.

Internal combustion engine with improved fuel injection, use of ethanol mixed with petrol, combined use of CNG and petrol, electric cars will continue.

Generation of electricity continue using fossil fuel, supplemented by gas turbine, hydro and solar powered systems with availability of cheap photovoltaic devices. Huge amount of electricity by harnessing solar power from Sahara desert will fuel large areas of Europe for which submarine cables have been laid under Mediterranean sea.

Use of distributed power generation will power isolated islands and hamlets, thus making life easier for a large section of population.

Space medicine is now helping patients. Extensive use of computers and other digital communication devices will make us having more and more problems like vertigo and lower back pain and other indisposition due to spondoliasis. More persons will now visit orthopaedic or sports medicine doctors.

Most of heart abnormality including repair of heart valve, ablation, By-pass of heart ,pace maker fitting are being carried out by robotic technology. Other improvements in development of prosthetic implements, neuro surgery, transplantation of heart- liver-kidney—cornea replacement –knee replacement-bariatric surgery will greatly improve quality of life. Research in virology will give rise to development in vaccines.

New appliances are now available for old people who are unable to move out of bed for mundane activities like visiting toilets and moving around room un-aided by use of zyroscopic device. Non invasive test of blood sugar level in persons are by analyzing of sensor in contact lense ,use of delayed release of components in tablet will cause less interaction of ingredients with stomach acid

All these development in medical science will produce identity crisis in men as most of body parts are now either transplanted organs/ repaired.

Space travel has now become popular among rich people indulging in space walk.

3-D printing is now used for manufacturing intricate/complicate machine parts.

Virtual reality world created through artificial intelligence are very popular among people ,use of which in some case may corrupt young people.

Young people will indulge in social network with result of simple expression of love, compassion are now in form of emoticons and gifs. We all will become lonely....
